

MXSweep

MXSWEEP – POLICY AND COMPLIANCE

OVERVIEW

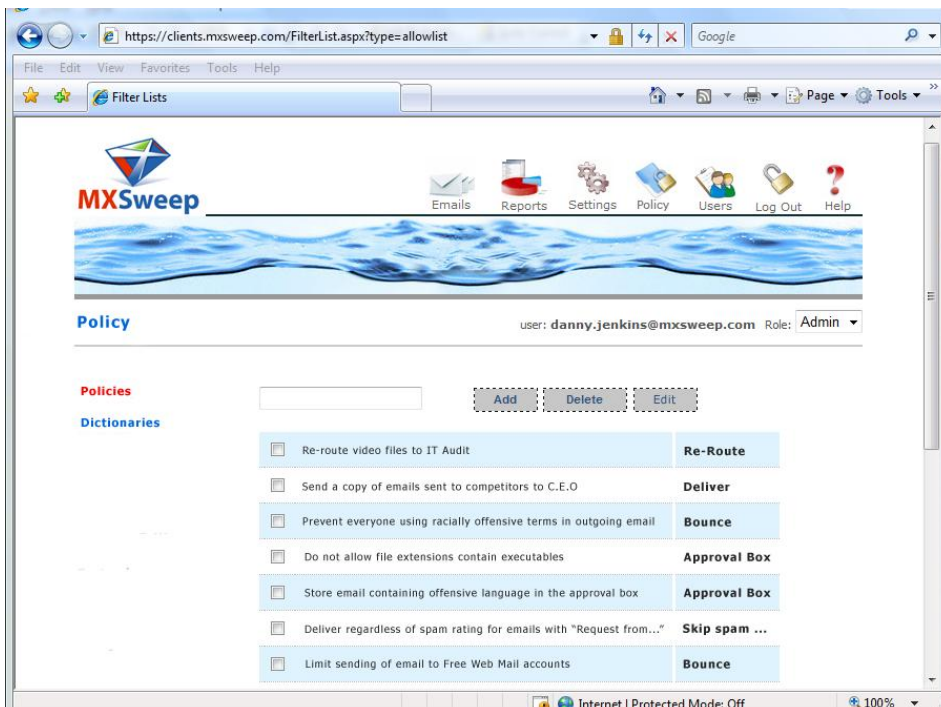

As businesses become more reliant on email the requirement to control content entering or leaving the email infrastructure is increasing.

The MXSweep custom policy engine allows business to create a number of custom policies to meet the business requirements. Policies include the ability to monitor email for certain content using either pre-defined dictionary filters or customer defined dictionary filters.

Using the power of regular expressions, administrators are able to create either simple or more complex filters.

Once a filter has been matched, customers are able to select either single or multiple actions to apply to the email.

INTERFACE

MULTIPLE POLICIES ON BOTH INBOUND AND OUTBOUND EMAIL ALLOW BUSINESSES TO RETAIN CONTROL OF EMAIL.

REGULAR EXPRESSIONS ALLOW I.T. ADMINISTRATORS TO WRITE CUSTOM FILTERS.

ANTI-RACIAL FILTERS PROTECT BUSINESSES FROM LITIGATION

MXSweep

MXSWEEP – POLICY AND COMPLIANCE

REGULAR EXPRESSIONS

MXSweep filters can be set using simple key word searches or regular expressions. Simple dictionaries allow administrators to simply add a list of words or phrases, the dictionary can then be selected as part of a search for Policy.

For administrators that want more control, the regular expression builder allows them to create their own advanced expressions as search criteria.

COMPLIANCE FILTERS

As part of the policy and compliance engine, MXSweep provides a list of pre-defined compliance filters. These filters include advanced heuristically based methods to scan for

- Racial Content
- Offensive Language
- Sexual Language

In addition a list of pre-defined identifiers exists, which allow for the intelligent searching of Credit Card Numbers, National Insurance, Social Security, or PRSI numbers.

APPROVAL PROCESS

You can select either single or multiple actions to apply when a policy condition is met.

The Approval Box, allows messages to be stored pending approval. Administrators are then able to approve messages for release.
